MONOCHROME A4 DESKTOP PRINTER

ECOSYS devices are designed to minimise both direct costs, such as consumables and indirect cost, such as maintenance administration. The cartridge-free system requires only the toner to be replaced. The modular design concept allows you to add workflow enhancing functions and a wide variety of paper handling capabilities as required. Integrated system software provides long-term cross-network compatibility. Kyocera's long-life components cost you and the environment less.

System platform:

With the Kyocera page design and control language PRESCRIBE IIe, even complex graphics, logos and forms (including multipart forms) can be created independently of the system and saved and updated in the printer. Consequently, integration into print files no longer applies. They are only accessed as required and therefore relieve the load on the network.

Status Monitor/KM-NET Viewer:

The settings of the FS-1300D can be checked visually and amended from any Windows PC, while the Status Monitor ensures easy setup and checking of the printer status via a USB connection. KM-NET Viewer is an advanced printer management software tool using the standardised protocol SNMP.
